

24x7 GEEKS SOLUTIONS

Empowering DevOps and Kubernetes services on Cloud Computing!

Introduction

Company Overview

- Geeks Solutions is a DevOps as a service provider formed in 2006.
- Geeks Solutions started with a small team of web hosting experts with an aim to provide 24×7 technical support services for Cpanel, Plesk, and virtualized servers.
- Now, we are AWS, Kubernetes, CNCF, and the Linux Foundation Partners with a team of 75+ Certified cloud and K8s engineers.
- We provide DevOps services on AWS, Azure, and GCP cloud platforms
- Geeks Solutions delivers certified expertise and integrated managed services across public and private clouds, microservices, and automated scalable platforms.
- We also provide 24x7 core services like infrastructure management and monitoring with security and regular infrastructure audit.

Kubernetes, SRE's, and Security Experts

Engagement and Service Model

At 24x7 Geeks Solutions, we understand the diversity of your project needs and offer a range of Engagement and Pricing models to cater to your specific requirements. Your decision-making process should consider factors such as the nature of the tech work, fitment evaluation, and the anticipated duration of engagement. Below are exclusive sections detailing finer attributes of options falling under both categories.

Project Based

- Ideal for: Small projects with a clearly defined scope.
- Benefits: Measure partnership effectiveness.

PoC / Risk-free Trial

- Ideal for: Exploratory projects with unclear scopes.
- Benefits: Evaluate feasibility without commitment.

Staff Augmentation / Dedicated resource

- Ideal for: Clear tech skill requirements, desire for work management control.
- Benefits: Augment your team with skilled professionals.

ODC / BOT (Build-Operate-Transfer)

- Ideal for: Offshore partnership to share risk, reduce cost, explore geo-specific talent.
- Benefits: Strategic partnership for cost-effective and talent-rich solutions.

How we work

Old-fashioned manual processes of deploying software have become part.

Nowadays, the most attractive set of software lifecycle practices is DevOps. We use a methodology that is based on the agile process of development. The collaboration of Dev and Ops brings business, development, and operations managers together to the new pace of business.

Our DevOps teams steer towards success in technically challenging, with innovative ideas of any scale projects with cost-optimizing results. Be it a startup, e-commerce solution, or public procurement system.

Partners & Technology
